CYBER WOLF

40 Days Basic Ethical Hacking Course

Foundation Program for Beginners in Cybersecurity

Provider: Cyber Wolf
www.cyberwolf.pro
cyberwolfofficials@gmail.com
Duration: 40 Days
Mode: Theory + Practical Labs

TOTAL DAYS	TOTAL WEEKS	DAILY CLASS
40 Days	**8 Weeks**	**2 Hours**

SKILL LEVEL	LAB ACCESS
Beginner	**Local + Hosted**

Course Modules - 40 Day Plan

Week 1 (Day 1-5): Cybersecurity Basics and Environment Setup

Day	Topic	What You Learn	Lab Type	Practice
Day 1	Introduction to Ethical Hacking	Hacker types, legal boundaries, responsible disclosure, career overview.	Theory	Class activity
Day 2	Networking Fundamentals	OSI, TCP/IP, ports, protocols, packet flow basics.	Local Lab	Network mapping
Day 3	Linux Basics for Hackers	Linux commands, file system, permissions, package management.	Local Lab	Kali setup
Day 4	Windows Command Line and PowerShell	Command usage for administration and security checks.	Local Lab	Windows hardening
Day 5	Virtual Lab Setup	VirtualBox/VMware setup, attacker and target machine setup.	Local Lab	Lab validation

Week 2 (Day 6-10): Reconnaissance and Scanning

Day	Topic	What You Learn	Lab Type	Practice
Day 6	Footprinting and OSINT	WHOIS, DNS lookup, search engine reconnaissance.	Hosted Lab	Target profiling
Day 7	Google Dorking	Finding exposed files, admin pages, and data leaks.	Hosted Lab	Dork exercises

Day	Topic	What You Learn	Lab Type	Practice
Day 8	Nmap Basics	Host discovery, port scanning, service detection.	Local Lab	Port scan report
Day 9	Advanced Nmap and Enumeration	NSE scripts, version detection, vulnerability scripts.	Local Lab	Service enumeration
Day 10	Vulnerability Scanning Intro	Nikto and basic scanner workflow.	Hosted Lab	Web scan

Week 3 (Day 11-15): Web Application Fundamentals

Day	Topic	What You Learn	Lab Type	Practice
Day 11	HTTP/HTTPS and Requests	Methods, headers, cookies, sessions.	Theory	Traffic analysis
Day 12	Burp Suite Setup and Proxy	Intercept, modify, and replay web requests.	Hosted Lab	Proxy lab
Day 13	Authentication Testing Basics	Weak login, brute force understanding, lockout policy checks.	Hosted Lab	Login testing
Day 14	Input Validation Issues	Basic SQLi and XSS concepts for beginners.	Hosted Lab	Payload testing
Day 15	Hands-on Mini Challenge	Combine recon and web basics to identify simple flaws.	Hosted Lab	Mini CTF

Week 4 (Day 16-20): Web Vulnerabilities Basics

Day	Topic	What You Learn	Lab Type	Practice
Day 16	SQL Injection Basics	Error-based and basic authentication bypass testing.	Hosted Lab	SQLi lab
Day 17	Cross-Site Scripting Basics	Reflected and stored XSS fundamentals.	Hosted Lab	XSS lab
Day 18	File Upload Vulnerabilities	Upload validation issues and unsafe extensions.	Local Lab	Upload bypass
Day 19	IDOR and Access Control Basics	Broken access checks and object manipulation.	Hosted Lab	IDOR testing
Day 20	Week Assessment	Practical assessment on covered vulnerabilities.	Hosted Lab	Assessment

Week 5 (Day 21-25): System and Network Security Basics

Day	Topic	What You Learn	Lab Type	Practice
Day 21	Password Security and Cracking Intro	Hashing basics, weak passwords, dictionary attacks.	Local Lab	Hashcat basics
Day 22	Wireshark Packet Analysis	Capture and inspect network traffic.	Local Lab	Packet lab
Day 23	MITM Concept and Defenses	ARP spoofing concept and secure mitigations.	Theory	Case study
Day 24	Firewall and IDS Basics	Basic filtering, logs, and alerts.	Local Lab	Rule simulation
Day 25	Secure Configuration Basics	Common misconfiguration checks in OS and services.	Local Lab	Checklist audit

Week 6 (Day 26-30): Tools and Automation Basics

Day	Topic	What You Learn	Lab Type	Practice
Day 26	Burp Repeater and Intruder	Manual request manipulation and basic fuzzing.	Hosted Lab	Parameter fuzzing
Day 27	Directory and Subdomain Discovery	ffuf and subfinder beginner usage.	Hosted Lab	Discovery lab
Day 28	Nuclei Intro	Template-based vulnerability checks.	Hosted Lab	Nuclei scan
Day 29	Bash/Python Automation Basics	Create simple scripts for repetitive recon tasks.	Local Lab	Script task
Day 30	Toolchain Practice Day	Use multiple tools in one beginner workflow.	Hosted Lab	Workflow exercise

Week 7 (Day 31-35): Reporting and Professional Workflow

Day	Topic	What You Learn	Lab Type	Practice
Day 31	Writing Good Bug Reports	Title, steps to reproduce, impact, and recommendations.	Theory	Report template
Day 32	Proof of Concept Documentation	Screenshots, evidence, and reproducibility.	Theory	PoC writeup
Day 33	CVSS Basics	How to estimate basic severity and impact.	Theory	Severity practice

Day	Topic	What You Learn	Lab Type	Practice
Day 34	Bug Bounty Platform Basics	Scope reading, program rules, and safe testing approach.	Hosted Lab	Scope analysis
Day 35	Mock Triage Session	How reports are accepted, duplicated, or rejected.	Theory	Triage simulation

Week 8 (Day 36-40): Final Practical and Certification

Day	Topic	What You Learn	Lab Type	Practice
Day 36	Full Recon Practical	Perform complete beginner recon on provided target lab.	Hosted Lab	Recon challenge
Day 37	Web Testing Practical	Test authentication, IDOR, XSS, and basic SQLi.	Hosted Lab	Web challenge
Day 38	System and Network Practical	Packet review and basic vulnerability checks.	Local Lab	Network challenge
Day 39	Final Report Submission	Create and submit final report with evidence and impact.	Theory	Final report
Day 40	Final Assessment and Certification	Course review, viva, and certification result.	Theory	Completion exam

Lab Availability

- **Local Labs:** Pre-built VM labs for offline practice on student laptop.
- **Wolf Hosted Labs:** Browser-based labs provided by Cyber Wolf for guided exercises.
- **Tools Included:** Kali Linux, Burp Suite, Nmap, Wireshark, ffuf, subfinder, Nuclei, and reporting templates.

Evaluation Criteria

Component	Type	Weight	Description
Weekly Labs	Practical	35%	Completion and quality of weekly hands-on tasks.
Mid Practical Test	Practical	20%	Week 4 skill validation.
Final Practical	Practical	30%	End-to-end ethical hacking exercise.

Component	Type	Weight	Description
Final Report	Documentation	15%	Professional report with proper evidence.
